Professional Summary

Information Systems Engineering graduate with a 3.56 CGPA and CPRE-certified, with a one-year internship delivering manual testing, REST API development, and requirements documentation across six concurrent projects at a AMTIS Solutions, a Malaysian software house. Experienced in writing structured test cases, logging defect reports, and validating API behaviour using Postman and Laravel within Agile SDLC/STLC workflows and GitLab-based version control. Looking to bring a detail-oriented QA mindset into a growth environment and develop test automation skills in Playwright and TypeScript.

Technical Skills

- **Programming Languages:** PHP, JavaScript, TypeScript (basic), SQL
- **Web Frameworks & Libraries:** Laravel, Vue.js, Tailwind CSS, HTML, CSS, Shadcn UI
- **Testing & QA:** Manual Testing, Regression Testing, Exploratory Testing, API Testing, Test Case Authoring, Defect Reporting, SDLC, STLC
- **API & Backend Tools:** RESTful APIs, Postman, Scramble (API Documentation), Laravel Passport (OAuth)
- **DevOps & Version Control:** Git, GitHub Actions (CI/CD), GitLab, Nginx, Digital Ocean VPS
- **Documentation & Methodology:** SRS, URS, STD, Microsoft Excel (test tracking), Microsoft Word, StarUML

Project Experience

Rule-Based API Gateway | Laravel, GitHub Actions, Digital Ocean VPS

September 2026– February 2026

- Developed a rule-based, role-based API gateway using Laravel to centralise and secure API routing across multiple internal services, enforcing authentication and access control across all registered endpoints.
- Delivered a fully documented system accepted as an MJCS 2025 journal paper submission, with complete SRS and API documentation covering endpoint specifications, authentication flows, and business rules.
- Used GitHub Actions to implement a CI/CD pipeline with automated deployment to Digital Ocean VPS, enabling zero-downtime production releases.

- Applied Laravel Passport for OAuth-based API authentication in a live production environment, enforcing token-based access control across gateway endpoints to secure inter-service communication.

Internal Management System | Laravel, Vue.js, MySQL

September 2026– February 2026

- Developed full-stack features for an internal management system using Laravel as the backend, Vue.js with Shadcn UI as the frontend, and MySQL as the database, covering the full SDLC from requirements gathering to production deployment.
- Delivered dynamic Excel import and export functionality with configurable column mapping using Maatwebsite, enabling non-technical users to upload and process structured data independently without developer support.
- Used GitLab for version control and collaborative development, maintaining a structured branching strategy and conducting peer code reviews across a multi-developer team throughout the project lifecycle.

Jerai Hill Resort | Mobile App Testing, Manual Testing

March 2026– May 2026

- Designed and executed structured manual test cases covering functional, regression, and exploratory test scenarios for a cross-platform mobile application across iOS and Android devices.
- Contributed to zero critical defects escaping to production across all tested releases by performing thorough pre-release regression testing and edge case validation, following a structured modified waterfall delivery process.
- Used structured Excel-based test logs to document defect reports with steps to reproduce, screenshots, and expected vs. actual results, supporting faster developer resolution and clear audit trails.
- Applied STLC principles across multiple test cycles in a real-world project environment, validating UI consistency, navigation flows, and cross-device behavior across varying screen sizes and OS versions.

Work Experience

Junior Software Developer

AMTIS Solutions dn. Bhd.

March 2025 – March 2026

- Engineered 3 full-stack web modules for the YMBI client project using Laravel, Vue.js, and MySQL, reducing manual reporting time by approximately 40% through automated Excel export pipelines built with Maatwebsite.

- Executed end-to-end manual testing across iOS and Android platforms for the Jerai Hill project, documenting over 50 test cases and defects using structured STLC processes, achieving a defect detection rate that supported on-time UAT sign-off.
- Produced comprehensive technical documentation including SRS, URS, and API specifications across 4 concurrent projects, applying CPRE-certified requirements engineering practices that reduced stakeholder change requests during development by approximately 30%.
- Collaborated across 6 concurrent project streams including FlutterFlow frontend development (ASWARA LMS), stakeholder engagement (Digital Masjid), and developer training delivery demonstrating cross-functional delivery within a structured modified waterfall SDLC environment.
- Developed dynamic Excel import functionality using Maatwebsite with configurable column mapping logic in Laravel, enabling clients to bulk-upload structured data with real-time validation reducing manual data entry effort by an estimated 50%.

Education

Universiti Teknologi Mara (UiTM)	2026
Bachelor of Information System Engineering (Hons.) Information Systems Engineering CGPA: 3.56 Deans List for two semester	
Universiti Teknologi Mara (UiTM)	2023
Diploma in Computer Science CGPA: 3.72 Deans List for three semester	

Certification

Certified Professional Requirements Engineer Foundation Level (CPRE-FL) Certification ID: MY-CPRE-FL-2024-00036	2024
Microsoft Full-Stack Developer Professional Certificate	Ongoing

Languages

Bahasa Malaysia (Native) | English (Converasational)
